Senior full stack engineer with 8 years building web and mobile products for startups and scale-ups. I take products from zero to production with TypeScript, Python, React/Next.js and React Native, and I have shipped AI agents, fintech payment integrations and systems running on 1,000+ microservices. Available for freelance work in US East-friendly hours.

What I can do for you

Service	Proof
MVPs and product builds (web + mobile)	Founder Engineer at Disso: designed and built the main control dashboard of the threat management product from scratch
AI agents and automation	Built agents and background processes for human risk analysis at Disso; led the move to AI models for restaurant support at Rappi
Fintech and payment integrations	Designed Node.js and Python APIs integrating external payment and financial services at Circle SPA
Scalable architecture and migrations	Worked on a platform with 1,000+ microservices at Rappi; designed the GraphQL API for a full ERP migration at Leiros SA

Experience

Founder Engineer, Disso

Belgium · 2024 – 2026

- Designed and built from scratch the main control dashboard for the core tool of Disso's threat management system.

- Built AI agents and background processes for human risk analysis and management.
- Owned architecture and delivery end to end as an early engineer.
- **4 organizations served, +10000 threats detected and blocked.**

Senior Full Stack Engineer, Rappi

Remote · May 2022 – October 2024

- Led the migration of the restaurant support area to artificial intelligence models.
- Worked on an infrastructure of 1,000+ microservices, keeping critical systems scalable and performant.
- **%86 tickets atomated, +\$30000 saved per month**

Semi Senior Full Stack Engineer, Circle SPA

Remote · November 2020 – May 2022

- Led development of web applications for financial projects, managing a team of 3 developers.
- Built a reusable component library from scratch.
- Designed and implemented APIs in Node.js and Python to integrate external payment and financial services.

Backend Engineer, Leiros SA

Porlamar, Venezuela · April 2020 – December 2020

- Designed and implemented a GraphQL API for the migration of the entire ERP platform to a new stack.
- Built SQL reports for the company's analytics platform.

Selected projects

- [Helsa](#): management platform for health clinics and doctors. Next.js, TypeScript, PostgreSQL.
- [PartySplit](#): mobile app to split expenses among friends at social events. React Native, Expo, Supabase.
- [Influencia Inmobiliaria](#): property and client management platform for real estate agents. Next.js, Payload CMS, AWS.
